DO NOT SCALE DRAWING

NOTES

- For legend and general notes see sheet No. 2.
- Existing tree lines were determined by assuming a general tree height of 60' (to 200') supplemented by approach surface data from FAA Form 3050-1 dated 1/25/77.
- Existing ground contours and profiles are based on the existing Report layout plan and supplemented by U.S.G.S. quadrangles and limited field survey by others.
- Existing trees, buildings, etc. shown in profile are only those found within the limits of the approach surfaces shown in plan view.
- All profile details are typical of those found on the extended runway concrete unless otherwise noted.
- The VDOT reports that some crosses exist as penetrations to the south side of the 20:1 PAV 200' 77 approach surface. The trees are located 3000' from Runway and 31'. Application of displaced threshold criteria superimposed over the PAV 200' 77 surface apparently clears these obstacles (AC 150/5320-13). Also, application of Obstacle Free Zone Criteria clears these obstacles (AC 150/5300-4b). A more detailed field survey is necessary to define the situation. No runway threshold displacement is recommended at this time.

 ULTIMATE AIRPORT PROPERTY ACQUISITION
 PROPOSED AVIATION EASEMENTS
 EXISTING AVIATION EASEMENTS
 AREA OF FUTURE LAND USE CONCERN (SEE NOTE 3, THIS SHEET)

- NOTES:**
- The "Forecasted Land Uses" are those felt by the Clarendon Planning Commission, as of June, 1979, to be the direction of the Town's future land use. The boundaries of these land uses reflect existing growth trends, existing industrial/commercial zoning and the 1981 COR 100 contour as shown on this plan.
 - The existing and ultimate elevation of Rutland State Airport is 100' ASL. The existing and ultimate horizontal surface elevation of Rutland State Airport is 31' MSL or 130' above the airport elevation.
 - See Master Plan Technical Report for details of designated Areas of Future Land Use Concern.
 - All unnoted structures not otherwise indicated are farm related buildings.
 - Composite Noise Rating (CNR) contour 100 for 1979 was not generated beyond the limits of the runway by that year's level of aircraft operations and is, therefore, not presented on this drawing.
