INTERSTATE TYPICAL SECTIONS

PARABOLIC DETAILS

THESE ITEMS ARE NOT PART OF STAGE I CONSTRUCTION

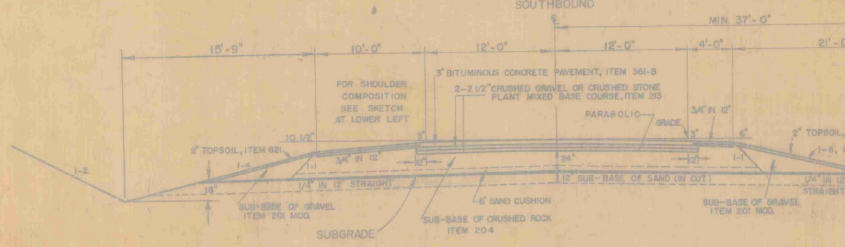

- 3" BITUMINOUS CONCRETE PAVEMENT, ITEM 361-B (± 1/4")
- 2-2 1/2" CRUSHED GRAVEL OR CRUSHED STONE PLANT MIXED BASE COURSE, ITEM 213 (± 1/2" FOR TOTAL THICKNESS)
- 24" SUB-BASE OF CRUSHED ROCK, ITEM 204 (± 1")
- SUB-BASE OF GRAVEL, ITEM 201 MOD.
- SHOULDERS: (1 1/2" BITUMINOUS CONCRETE PAVEMENT, ITEM 361-B (TOP COURSE ONLY) WITH TACK COAT, TYPE III, ITEM 315 MOD.
- 1 1/2" CRUSHED STONE SHOULDERS, ITEM 303

PERMISSIBLE TOLERANCES IN PARENTHESIS APPLY TO THICKNESS ONLY

12" GRANULAR BORROW, ITEM 105 (± 1") IN FILL
12" SUB-BASE OF SAND, ITEM 202 (± 1") IN CUT
TO BE PLACED AS NOTED ON THE PLANS OR AS DIRECTED BY THE ENGINEER

CONSTRUCTED AS DESIGNED

SOUTHBOUND

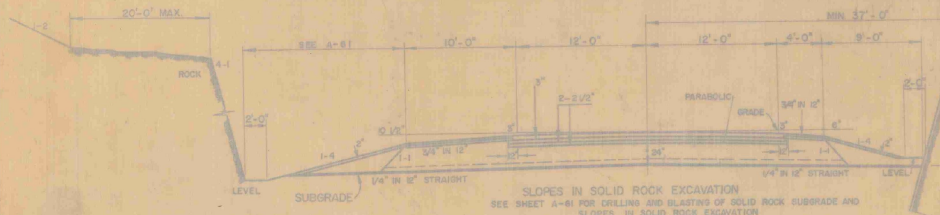

ITEMS ABOVE SUBGRADE ARE NOT PART OF STAGE I CONTRACT.

NORTHBOUND

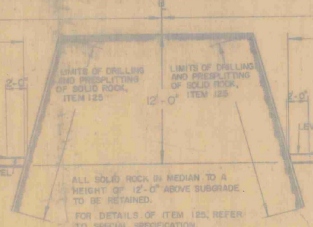

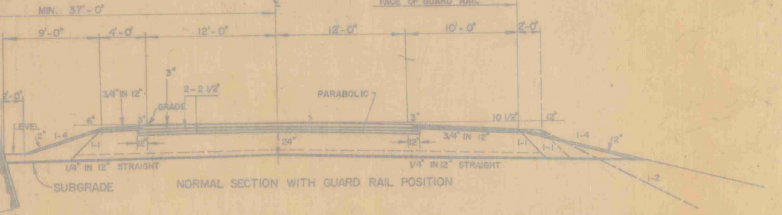

MAXIMUM BANKED SECTION 5/16" PER FT.

NOTE: DRILLING AND PRESPLITTING OF SOLID ROCK, ITEM 125, TO A DEPTH OF 4'-0" BELOW SUBGRADE, IS NOT TO BE USED WHERE SLOPE MEASUREMENT BETWEEN TOP OF LEDGE AND SUBGRADE IS LESS THAN 10'-0".

SLOPES IN SOLID ROCK EXCAVATION
SEE SHEET A-61 FOR DRILLING AND BLASTING OF SOLID ROCK SUBGRADE AND SLOPES IN SOLID ROCK EXCAVATION

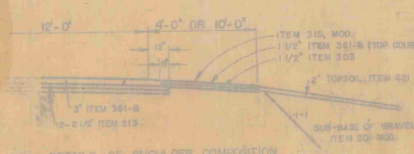

NORMAL SECTION WITH GUARD RAIL POSITION

SEEDING, ITEM 611 %	LBS/ACRE	NAME	PURITY %	GERM %
33.33	20	CREEPING RED FESCUE	97	85
10.00	6	TALL FESCUE	85	80
16.67	10	KENTUCKY BLUE GRASS	85	75
8.33	5	RED TOP	92	90
16.67	10	DOMESTIC RYE GRASS	98	90
5.33	8	BIRDSFOOT TREFOIL (EMPIRE)	99	80
0.48	1/4	WEED SEED		
9.19	5 1/4	INERT MATERIAL		
100.00	60 LBS PER ACRE			

30 LBS OF WINTER RYE PER ACRE TO BE ADDED TO THE ABOVE SEEDING FORMULA IF DIRECTED BY THE ENGINEER.

DETAILS OF SHOULDER COMPOSITION

GENERAL NOTES:
FOR ROUNDING OF SLOPES, SEE STANDARD SHEET B-5
STEEL MARKER POSTS, ITEM 547-D, TO BE PLACED AS DIRECTED BY THE ENGINEER.
MULCH, ITEM 622, TO BE PLACED ON ALL EARTH SLOPES AT THE RATE OF TWO TONS PER ACRE.
FERTILIZER, ITEM 615, SHALL BE MIXED AS FOLLOWS:

NITROGEN	10 %
PHOSPHORUS	20 %
POTASH	10 %

FERTILIZER SHALL BE DELIVERED IN BAGS OF NOT TO EXCEED 100 LBS EACH AND IS TO BE APPLIED AT THE RATE OF 500 LBS PER ACRE.

SUMMARY BY COLUMNS

SHEET NO.	COL. NO.	EXCAVATION TOTAL CU YDS	EXCAVATION ROCK CU YDS	EMBANKMENT CUBIC YARDS

REMARKS

EARTH AND ROCK EXCAVATION		230,117
SOLID ROCK EXCAVATION		1,349
EARTH EXCAVATION		228,768
PLANIMETERED FILL		685,569
LESS FACTORED SOLID ROCK	1.4	1,889
LESS DISPLACEMENT OF ANY LARGE STRUCTURES		
NET PLANIMETERED FILL		683,680
FACTOR	1.25	
PLANIMETERED FILL INCLUDING FACTOR		854,600
MATERIALS AVAILABLE FOR FILLS		
EARTH EXCAVATION		228,768
CHANNEL EXCAVATION	60%	1,020
UNDERDRAIN EXCAVATION	60%	712
STRUCTURE EXCAVATION	40%	480
GRANULAR BORROW		76,000
TOTAL MATERIAL AVAILABLE FOR FILL		306,980
TOTAL FILL INCLUDING FACTOR		854,600
TOTAL MATERIAL FOR FILL		306,980
BORROW		547,620

PLAN

Scale 1" = 20'-0"

ELEVATION

Scale: 1" = 20'-0"

GENERAL NOTES:-

1. Elevation datum is geo level based on nearest U.S. Government vertical control.
2. For additional notes, see SCB-01-65 and detail sheets.
3. All piles are to be driven to design load as shown on abutment and pier sheets. All piling is to be driven a minimum of 10 ft. into original ground.
4. 118m 505 Pile Loading Tests shall be used only when ordered in writing by the Engineer.

SUPERSTRUCTURE NOTES

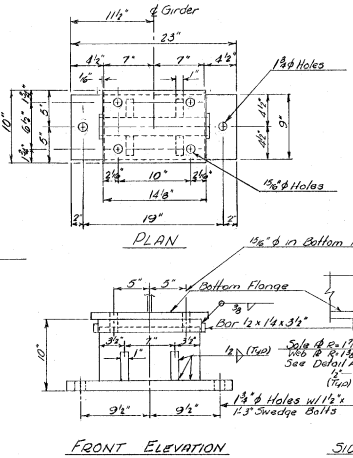

1. For General Notes see Std. Sh. SCB-01-65 and Br. 100.
2. All structural steel shall be ASTM A36-62T unless otherwise noted on the plans.
3. All field connections shall be made with ⅞" ϕ High Strength bolts in 1⅜" holes unless otherwise noted on the plans.
4. Water Repellent Item 440 shall be applied to safety walk, fascia and bottom of slab back to drip bead.

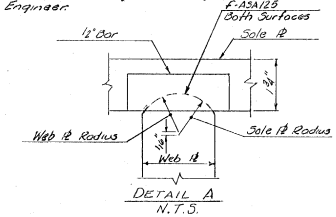

BEARING DEVICE NOTES

1. Preformed Fabric Pads or Canvas and Red Lead pads ⅛" thick, equal in size to the bearing plates, shall be used under each bearing, conforming to Spec. 401.02(23).
2. Align devices so that all rocker arm shafts will be vertical at 45°F. For temperatures other than 45°F, adjust rockers and expansion devices by the following amount in feet according to whether bridge is in expanded or contracted position: Length from fixed bearing x 0.0000065 x degree of change from 45° F.
3. Contact surfaces of rockers, to be given shop coat of White Lead & Tallow. Pintel holes are to be filled with graphite at time of placement. Remainder of bearing, to be given 3 coats of paint in accordance with Vt. Spec. 401.03. Those parts of bearing, coated with White Lead & Tallow, shall be cleaned prior to erection & coated with graphite & grease as directed by the Engineer.

NOTES:
1. For General Notes see Br 100 of 113.
2. Maximum design pile load is 22 Tons.
3. See note 3 on Br 100 of 113 for additional pile notes.
4. All abutment concrete is to be Class B.
5. No concrete is to be placed above this point until Girders have been profiled and final grade is established by the Engineer. This joint may be omitted and joint at adjacent bridge seat used.
6. All reinforcing steel to have minimum cover of 2" except 3" in footing.
7. Slope bridge seats ¼ in. per ft. to drain except under bearings.
8. Front face of backwall above bridge seats and inside face of abutment and wings shall be coated with Item 410, Paint Waterproofing.
9. Item 440, Water Repellent, shall be used on all exposed areas of abutments and wings not otherwise treated.
10. For details of curved granite curb and block see SCB-D4-65.
11. For details of Cable Guard Rail Anchorage see Std Sh G-3A. Bolts are to be cast in abutment wing. Anchors and first post to be paid for as Structural Steel Item 404 A.

Typical Bar Bends

NOTES

1. All dimensions are out to out of bar
2. 'J' dimensions on 180° hooks to be shown only where necessary to restrict hook size otherwise standard hooks are to be used
3. Where 'J' is not shown, 'J' will be kept equal to or less than 'H'. Where 'J' can exceed 'H', it should be shown.
4. 'H' dimension on stirrups to be shown where necessary to restrict hooks.
5. Where bars are to be bent more accurately than standard bending tolerances bending dimensions which require closer working should have limits indicated
6. Figures in circles show types
7. No allowance for bend curvature is to be made except for standard hook & radii in excess of same.

Standard Hook Detail

Bar Sizes

Equivalent Size	Present Number	Weight per ft
4/8"	2	.167
5/8"	3	.376
5/8"	4	.668
5/8"	5	1.043
5/8"	6	1.502
7/8"	7	2.044
1'-0"	8	2.670
1'-0"	9	3.400
1'-0"	10	4.303
1'-0"	11	5.313
1'-0"	14 S	7.650
2'-0"	18 S	13.600

GENERAL NOTES

(1) Unless otherwise designated all standard reinforcement shall be deformed bars conforming with the requirements of the "Standard Specification for Billet-Steel Bars for Concrete Reinforcement" (Intermediate Grade) AASHO Designation M31-60 or its latest revision.

(2) Unless otherwise designated all special large size reinforcement shall be deformed bars conforming with the requirements of the "Standard Specification for Special Large size Deformed Billet-Steel Bars for Concrete Reinforcement" (Intermediate Grade) AASHO Designation M-174-60 or its latest revision.

(3) * Denotes one extra bar added for testing purposes.

(4) Stirrups and tie bars shall be bent around a pin having a diameter not less than two times the minimum thickness of the bar. Bends for other bars shall be made around a pin having a diameter not less than six times the minimum thickness except for bars larger than 1 inch, in which case the bends shall be made around a pin of eight bar diameters.

Note: For spans 3, 4 & 5 see Sheet BR.205.

GENERAL NOTES

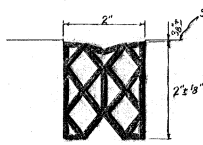

1. For General Notes see Standard Sheet SCB-01-65.
2. Construct embankment within area of abutments to 6" above footing elevation, prior to driving piling. Excavation of this material to be paid as Structure Excavation, Item 109.
3. The abutments and piers are parallel to each other.
4. Superstructure details shall be as per SCB-24-65 except Span #1 (39' span) is to have 36 WF 135 beams.
   Modify the standard details so as to eliminate the approach slab bracket. Modify superstructure details to provide 3/8" per foot superelevation.
   No scuppers are to be used on this bridge.
5. Dimensions given at beams are horizontal dimensions from ℄ bearing to ℄ bearing.
6. The two interior beams in each span are parallel to the minor chord.
7. Dimensions given for diaphragms are horizontal dimensions from ℄ beam to ℄ beam.
8. Minimum clearance from reinforcing steel to face of concrete shall be 3" in footings and 2" elsewhere, except where detailed otherwise.
9. Water Repellent-Item 440 shall be applied to top of safety walks, fascia, and back to drip bead under the slab.

CURB JOINT DETAIL
N.T.S.

Allow 1/8" width and 2⅜" depth for installation. Use at safety walk joints. Other configurations having the approval of the Bridge Engineer may be substituted.

DETAILS - ITEM 372-C JOINT SEALER (PREFORMED)
Material shall be premoulded Neoprene Rubber. N.T.S.

TYPICAL BAR BENDS

NOTES

1. All dimensions are out to out of bar
2. 'J' dimensions on 180° hooks to be shown only where necessary to restrict hook size otherwise standard hooks are to be used
3. Where 'J' is not shown, 'J' will be kept equal to or less than ⌀ IN. TH. Where 'J' can exceed 'H', it should be shown.
4. 'H' dimension on stirrups to be shown where necessary to restrict hooks.
5. Where bars are to be bent more accurately than standard bending tolerances bending dimensions which require closer working should have limits indicated
6. Figures in circles show types
7. No allowance for bend curvature is to be made except for standard hook & radii in excess of same.

2"	18S	13.600

GENERAL NOTES

(1) Unless otherwise designated all standard reinforcement shall be deformed bars conforming with the requirements of the "Standard Specification for Billet-Steel Bars for Concrete Reinforcement"(Intermediate Grade) AASHO Designation M31-60 or its latest revision.

(2) Unless otherwise designated all special large size reinforcement shall be deformed bars conforming with the requirements of the "Standard Specification for Special Large size Deformed Billet-Steel Bars for Concrete Reinforcement"(Intermediate Grade) AASHO Designation M-174-60 or its latest revision.

(3) * Denotes one extra bar added for testing purposes.

(4) Stirrups and tie bars shall be bent around a pin having a diameter not less than two times the minimum thickness of the bar. Bends for other bars shall be made around a pin having a diameter not less than six times the minimum thickness except for bars larger than 1 inch, in which case the bends shall be made around a pin of eight bar diameters.

TYPICAL BAR BENDS

NOTES

1. All dimensions are out to out of bar
2. 'J' dimensions on 180° hooks to be shown only where necessary to restrict hook size otherwise standard hooks are to be used
3. Where 'J' is not shown, 'J' will be kept equal to or less than 'H'. Where 'J' can exceed 'H', it should be shown.
4. 'H' dimension on stirrups to be shown where necessary to restrict hooks.
5. Where bars are to be bent more accurately than standard bending tolerances bending dimensions which require closer working should have limits indicated
6. Figures in circles show types
7. No allowance for bend curvature is to be made except for standard hook & radii in excess of same.

STANDARD HOOK DETAIL

BAR SIZES

Notes

1. For General Notes see Std. Dwg. SCB-D1-65.
2. The Superstructure is of Continuous Plate Girder Design for a 30-ft Roadway.
3. Item 440 Water Repellent shall consist of furnishing and applying water repellent on exterior concrete surfaces on top of the safety walks, on the fascia and back to the drip bead under the slab, on the sides, ends and bottoms of Pier Cap, and on the exposed areas of Abutments not otherwise treated.

④ Item 502, Preparing Subsurface For Driving Piling shall be used at Abut. #1 if called for by the Engineer in order to drive the steel piles (12BP53) a minimum in-place length of 11'-0".

⑤ For details of conduit in curb see sheet BR-306.

⑥ Item 505, Pile Loading Tests shall be used only when ordered in writing by the Engineer.

Steel Piles (12BP53) shall be driven to point bearing on ledge unless the designed bearing capacity of 45 tons per p.i.e. is attained above ledge elevation.

Notes

① For Typical Bridge Section see Bridge Sheet BR-307.
② For General Notes and Design Stresses see Std. Dwg. SCB-D1-65.
③ For details of Bridge Railing see Std. Dwgs. SB-R1-64, Sheets 1 & 2 and SB-R2-65.
④ For details of Curb, Score Marks and Pile Splices See Std. Dwg. SCB-D6-65, Details A, B & F.
⑤ For details of Joint in Curb and Roadway see Sheet BR-308 and BR-310.
⑥ For details of Item 372-C, Type A, see Sheet BR-314.
⑦ For details of Dead End Anchorage at Bridge Approaches see Std. Dwg. G-3a.
⑧ The two 3" I.D. utility conduits shall be furnished, installed, and anchored against floation by the Contractor.
⑨ Installation is in the curb section on the north side of the bridge.
⑩ The 3" I.D. utility conduits shall be either galvanized steel, aluminum, fibre, or non-metalic material suitable for encasement in concrete, as approved by the Engineer.
⑪ Longitudinal expansion joints in the conduit shall be installed at each end of the bridge to provide for movement due to expansion, contraction, or deflection of the bridge.
⑫ The cost of furnishing and installing the conduits shall be included in the unit price bid for Concrete Class AA, Item 401-AA.

Typical Bridge Section
Scale: ½"=1'-0"

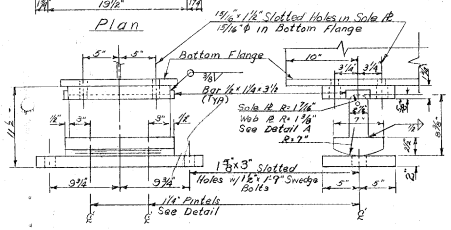

Section A-A
Scale: ½"=1'-0"

Superstructure Notes
1. For General Notes see Std Sh. SCB-D1-65 and Br. Sh. 300
2. All structural steel shall be ASTM A 36-62T unless otherwise noted on the plans
3. All field connections shall be made with ⅞" ℄ High Strength bolts in 15/16" ℄ holes, unless otherwise noted on the plans.

Bearing Device Notes
1. Red Lead and Canvas or Preformed Fabric Pads ⅛" thick, equal in size to the bearing plates shall be used under each bearing conforming to Specification 404.02 (23).
2. Align devices so that all rocker arm shafts will be vertical at 45°F.
3. Contact surfaces of rockers to be given shop coat of white lead and tallow. Pintel holes are to be filled with graphite at time of placement. Remainder of bearing to be given 3 coats of paint in accordance with Vt. Spec. 404.03

TYPICAL BAR BENDS

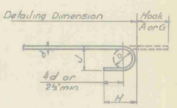

NOTES

1. All dimensions are out to out of bar
2. 'J' dimensions on 180° hooks to be shown only where necessary to restrict hook size otherwise standard hooks are to be used
3. Where 'J' is not shown, 'J' will be kept equal to or less than ½ 'H'. Where 'J' can exceed 'H', it should be shown.
4. 'H' dimension on stirrups to be shown where necessary to restrict hooks.
5. Where bars are to be bent more accurately than standard bending tolerances bending dimensions which require closer working should have limits indicated
6. Figures in circles show types
7. No allowance for bend curvature is to be made except for standard hook & radii in excess of same.

Revised 7/18/66 R.A.O.
Additional steel for revised Abut Nº 2

GENERAL NOTES

(1) Unless otherwise designated all standard reinforcement shall be deformed bars conforming with the requirements of the "Standard Specification for Billet-Steel Bars for Concrete Reinforcement"(Intermediate Grade) AASHO Designation M31-60 or its latest revision.

(2) Unless otherwise designated all special large size reinforcement shall be deformed bars conforming with the requirements of the "Standard Specification for Special Large size Deformed Billet-Steel Bars for Concrete Reinforcement"(Intermediate Grade) AASHO Designation M-171-60 or its latest revision.

(3) * Denotes one extra bar added for testing purposes.

(4) Stirrups and tie bars shall be bent around a pin having a diameter not less than two times the minimum thickness of the bar. Bends for other bars shall be made around a pin having a diameter not less than six times the minimum thickness except for bars larger than 1 inch, in which case the bends shall be made around a pin of eight bar diameters.

NOTES

1. For General Notes see Std. Sh. SCB-D1-65.
2. For Superstructure details see Std. Sh. SCB-38-65 and Typical Bridge Section on Sheet BR-408
3. For Details of Dead End Anchorage see Std. Sh. G-3a.
4. Item 440, Water Repellent, shall consist of furnishing and applying water repellent on exterior concrete surfaces on top of the safety walk, sidewalk, on the fascia and back to the drip bead under the slab, on the sides, ends, and bottoms of all pier caps, and on exposed faces of abutments not otherwise treated.
5. All 12 BP 53 Steel Piles shall be driven to the designed bearing capacity of 45 Tons per pile. In any case, these piles are to be driven to penetrate into the original ground at least 10 feet. Minimum length of Pile is to be 10' below Bottom of footing.
6. Item 505, Pile Loading Tests, to be used only if ordered by the Engineer in Writing.

GENERAL NOTES

(1) Unless otherwise designated all standard reinforcement shall be deformed bars conforming with the requirements of the "Standard Specification for Billet-Steel Bars for Concrete Reinforcement" (Intermediate Grade) AASHO Designation M31-60 or its latest revision.

(2) Unless otherwise designated all special large size reinforcement shall be deformed bars conforming with the requirements of the "Standard Specification for Special Large size Deformed Billet-Steel Bars for Concrete Reinforcement" (Intermediate Grade) AASHO Designation M-127(A)-60 or its latest revision.

(3) * Denotes one extra bar added for testing purposes.

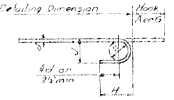

(4) Stirrups and tie bars shall be bent around a pin having a diameter not less than two times the minimum thickness of the bar. Bends for other bars shall be made around a pin having a diameter not less than six times the minimum thickness except for bars larger than 1 inch, in which case the bends shall be made around a pin of eight bar diameters.

TYPICAL BAR BENDS

NOTES

1. All dimensions are out to out of bar.
2. "J" dimensions on 180° hooks to be shown only where necessary to restrict hook size otherwise standard hooks are to be used.
3. Where "J" is not shown, "J" will be kept equal to or less than C/H + 1½". Where "J" can exceed "H", it should be shown.
4. "H" dimension on stirrups to be shown where necessary to restrict hooks.
5. Where bars are to be bent more accurately than standard bending tolerances bending dimensions which require closer working should have limits indicated.
6. Figures in circles show types.
7. No allowance for bend curvature is to be made except for standard hook & radii in excess of same.

TYPICAL BAR BENDS

NOTES

1. All dimensions are out to out of bar.
2. "D" dimensions on 180° hooks to be shown only where necessary to restrict hook size otherwise standard hooks are to be used.
3. Where "D" is not shown, "D" will be kept equal to or less than 6"D".
   "D". Where "D" can exceed "B", it should be shown.
4. "B" dimension on stirrups to be shown where necessary to restrict hooks.
5. Where bars are to be bent more accurately than standard bending tolerances pending dimensions which require closer working should have limits indicated.
6. Figures in circles show types.
7. No allowance for bend curvature is to be made except for standard hook & radii in excess of same.

Defining Dimension — Hook Mark G

Hook or Stirrup

STANDARD HOOK DETAIL

BAR SIZES

Equivalent Size	Present Number	Weight per ft
3/8"	3	.376
1/2"	4	.668
5/8"	5	1.043
3/4"	6	1.502
7/8"	7	2.044
1"	8	2.670
1 1/8"	9	3.400
1 1/4"	10	4.303
1 3/8"	11	5.313
1 3/4"	14.5	7.650
2"	18S	13.600

GENERAL NOTES

(1) Unless otherwise designated all standard reinforcement shall be deformed bars conforming with the requirements of the "Standard Specification for Billet-Steel Bars for Concrete Reinforcement" (Intermediate Grade) AASHO Designation: M31-60 or its latest revision.

(2) Unless otherwise designated all special large size reinforcement shall be deformed bars conforming with the requirements of the "Standard Specification for Special Large size Deformed Billet-Steel Bars for Concrete Reinforcement" (Intermediate Grade) AASHO Designation M-174-60 or its latest revision.

(3) X Denotes one extra bar added for testing purposes.

(4) Stirrups and tie bars shall be bent around a pin having a diameter not less than two times the minimum thickness of the bar. Bends for other bars shall be made around a pin having a diameter not less than six times the minimum thickness except for bars larger than 1" inch, in which case the bends shall be made around a pin of eight bar diameters.

GENERAL NOTES:

1. MATERIAL FOR ANCHOR BOLTS SHALL CONFORM TO ASTM 276 TYPE 430 STAINLESS STEEL.
2. MATERIAL FOR CLAMP BAR SHALL TO BE U.S.A. STD. A36 TYPE B.
3. MATERIAL FOR ANCHOR BOLT & TUBE SHALL BE ASTM A7.
4. EXPOSED ENDS OF RAIL TUBE SHALL BE CLOSED WITH END-FIT TYPE RAIL END CAPS. CAPS SHALL BE ALUMINUM ALLOY 43 MOLD CASTINGS CONFORMING TO A.S.T.M. SPEC. B26 ALLOY 43-A-T4.
5. ALL WELDING SHALL BE METAL INERT GAS PROCESS.
6. RAILING SYSTEM SHALL BE CONTINUOUS WITH EACH RAIL SECTION ATTACHED TO A MIN. OF THREE POSTS, WHERE POSSIBLE. EACH JOINT IN RAIL SECTION SHALL BE SPLICED.
7. ANCHOR BOLTS ARE TO BE PRESET IN CONCRETE BY MEANS OF TEMPLATES BY THE CONTRACTOR.
8. MATERIALS FOR ALUMINUM WASHERS SHALL BE A.S.T.M. B 209 ALLOY ALCLAD 2024-T4. MATERIAL FOR RIVETS SHALL BE A.S.T.M. QQ R 351 ALLOY 2017-T4. RIVETS SHALL BE BUTT TYPE WITH CONE POINT AND COUNTERSUNK HEAD.
9. ALL ALUMINUM SURFACES IN CONTACT WITH CONCRETE SHALL BE GIVEN ONE SHOP COAT OF ZINC CHROMATE PRIMER.
10. BASE IS BAR SHALL BE PRESENTED PRESSURE TREATED IN ACCORDANCE WITH SPEC. 2.16.3 (K).
11. MATERIAL FOR POSTS, BASES, SPLICE PLATES AND CLAMP BAR SHALL BE ALUM. EXTRUSIONS CONFORMING TO ASTM B 221 ALLOY 6061-T6.
12. WELD FILLER WIRE SHALL BE ASTM B 285 ALLOY 5356.

GENERAL NOTES:

1. MATERIAL FOR ANCHOR BOLTS SHALL CONFORM TO ASTM-A276 TYPE 430 STAINLESS STEEL
2. MATERIAL FOR CLAMP BAR SCREWS TO BE S.S.A. STN TYPE 430
3. MATERIAL FOR ANCHOR BOLTS NUTS TO BE A.S.T.M. A7
4. EXPOSED ENDS OF RAIL TUBE SHALL BE CLOSED WITH CENTER TYPE RAIL END CAPS. CAPS SHALL BE ALUMINUM ALLOY SAND MOLD CASTINGS CONFORMING TO A.S.T.M. SPEC. B26 ALLOY 43 TO A
5. ALL WELDING SHALL BE METAL INERT GAS PROCESS
6. RAILING SYSTEM SHALL BE CONTINUOUS WITH RAIL BRACKETS ATTACHED TO A MINIMUM OF THREE POSTS, WHERE POSSIBLE EACH JOINT IN RAIL SHALL BE SPLICED.
7. ANCHOR BOLTS ARE TO BE PRESET IN CONCRETE BY ERECTOR TEMPLATES BY THE CONTRACTOR
8. MATERIAL FOR ALUMINUM WASHERS SHALL BE A.S.T.M. B-209 ALLOY ALCLAD 2024-T4, MATERIAL FOR RIVETS SHALL BE A.S.T.M. B-211 ALLOY 6061-T6 OR 6053-T6, RIVETS SHALL BE BRAZIER HEAD CONE POINT AND COLD DRIVEN.
9. ALL ALUMINUM SURFACES IN CONTACT WITH CONCRETE SHALL BE GIVEN ONE COAT OF ZINC CHROMATE PAINT.
10. FABRIC AND SHALL BE PREFORMED RADIUS IN ACCORDANCE WITH A.A.S.H.O. SPEC. 2.10.3 (K)
11. MATERIAL FOR POSTS, BASES, OFFICE FABRICATION AND CLAMP BARS TO BE ALUM. EXTRUSIONS 6061-T6 TEMPER. TUBULAR RAIL ALSO 6061-T6
12. WELD FILLER WIRE SHALL BE ASTM B285 ALLOY 5356
