STATE OF VERMONT AGENCY OF TRANSPORTATION

PROPOSED IMPROVEMENT BRIDGE PROJECT TOWN OF JAY COUNTY OF ORLEANS

ROUTE NO : VT 105 (MINOR ARTERIAL) BRIDGE # 50

PROJECT LOCATION
BEGINNING AT A POINT ON VT. ROUTE 105 APPROXIMATELY 6.15 MILES EASTERLY
OF THE RICHFORD / JAY TOWN LINE AND EXTENDING EASTERLY FOR 0.007 MILES.

PROJECT DESCRIPTION
CONSTRUCTION OF A NEW BOX CULVERT ON THE EXISTING ALIGNMENT
WITH NECESSARY ROADWAY APPROACHES AND CHANNEL WORK.

LENGTH OF STRUCTURE : 17.00 FEET 0.0032 MILES
LENGTH OF ROADWAY : 19.00 FEET 0.0036 MILES
LENGTH OF PROJECT : 36.00 FEET 0.0068 MILES

RECORD PLANS	
CONTRACTOR:	S.D. IRELAND BROTHERS CORP. - BURLINGTON, VT
RESIDENT ENGINEER:	DOUG BUMPS
CONSTRUCTION BEGAN:	JULY 16, 2007
CONSTRUCTION COMPLETE:	AUGUST 1, 2007
RECORD PLANS BY:	DOUG BUMPS & CHIP PIERCE
I HEREBY CERTIFY THAT ALL THE CONSTRUCTION REQUIRED BY THIS SET OF DRAWINGS HAS BEEN ACCOMPLISHED AS INDICATED HEREIN.	
BY	<i>[Signature]</i> RESIDENT ENGINEER
DATE	3/5/08
NOTE: Any further information concerning final quantities, amounts or other details relative to this project may be found at Central Files in the electronic archives.

THESE PLANS ARE SUBJECT TO SUCH ENGINEERING CHANGES AS MAY BE REQUIRED BY THE FEDERAL HIGHWAY ADMINISTRATION OR THE DIRECTOR OF PROGRAM DEVELOPMENT.
CONSTRUCTION IS TO BE CARRIED ON IN ACCORDANCE WITH THESE PLANS AND THE STANDARD SPECIFICATIONS FOR CONSTRUCTION DATED 2006, AS APPROVED BY THE FEDERAL HIGHWAY ADMINISTRATION ON JUNE 15, 2006 FOR USE ON THIS PROJECT, INCLUDING ALL SUBSEQUENT REVISIONS AND SUCH REVISED SPECIFICATIONS AND SPECIAL PROVISIONS AS ARE INCORPORATED IN THESE PLANS.

NOTE: VT. ROUTE 105 WILL BE CLOSED TO THROUGH TRAFFIC FOR 10 DAYS. SEE SHEETS 20 TO 27 FOR DETOUR PLANS.

EROSION CONTROL NARRATIVE

GENERAL EROSION PROVENTION & SEDIMENT CONTROL (EPSC) GUIDELINES

The Erosion Control plans are intended as a guide for preventing soil erosion and controlling sediment. The work outlined in this narrative consists of applying measures throughout the duration of the project to control erosion and minimize the sedimentation of the receiving waters.

A Temporary erosion control plan will be submitted by the contractor for approval by the Agency of Transportation.

The contractor will use other temporary or permanent erosion control devices as necessitated by the sequence of construction and as directed by the Resident Engineer. See Subsection 105.23 of the 2006 Vermont Standard Specifications for Construction.

The contractor shall coordinate the installation, use, and removal of erosion and sediment control measures with construction activities to assure economical, effective, and continuous erosion and sediment control. The contractor shall employ temporary stabilization practices in incremental stages as construction activities proceed.

The Resident Engineer may direct the installation of certain erosion control measures in order to forestall or mitigate potential or existing erosion problems, or to respond to storm events or damage by construction operations.

The contractor shall install erosion and sediment control measures as sequenced on the EPSC Plan, or as directed by the Resident Engineer. The type, size, and location of any erosion control device shall not be changed unless prior approval is obtained from the Resident Engineer. Any approved changes shall be noted on the EPSC Plans and discussed in the weekly report. The contractor shall inspect all erosion control measures daily and after each rainfall event. The contractor shall repair all damaged erosion control measures immediately. All erosion control measures that trap sediment, such as sediment basins and silt fences, shall be cleaned out when their capacity reaches 50%.

The Resident Engineer' s approval should be obtained prior to installing any erosion controls not specified in the EPSC Plans. However, in emergency situations where the Resident Engineer is not immediately available, the contractor should repair or install the erosion controls as he/she deems necessary and report the incident to the Resident Engineer as soon as it is practical.

The contractor shall control all sediment-laden runoff within the project site. Clean runoff from outside the project site shall be routed through the project site using diversion berms, diversion channels, and temporary or permanent culverts.

Construction equipment will not be allowed to operate on the outside of the perimeter control measures.

Construction equipment will not be allowed to cross a flowing stream, or disturb the existing stream banks, unless authorized by the Resident Engineer.

All in-stream construction must take place in a dry channel between June 1st and October 1st.

In general, preserve existing vegetation, shrubs, and trees whenever possible.

Silt fence shall be placed at the toes of all fill slopes and shall be constructed so that flows cannot bypass the ends. Areas directly below (downhill) of the silt fences must be un-disturbed and vegetated.

As construction progresses, implementation of additional erosion control measures may be required as deemed necessary by the On-Site Coordinator and as approved by the Resident Engineer.

INFORMATION REQUIRED FROM CONTRACTOR

Much of the erosion control information shown on the erosion control plans and described in this narrative is general in nature. More site specific information is not yet available as a contractor has not yet been selected. The following list outlines some of the specific information that is not included in the erosion control plans and described in this narrative:

1. The location of vehicle tracking pads.
2. The location of stockpiles, staging areas, and disposal areas.
3. A specific timetable of construction and earthwork activities.
4. The name, title, qualifications, and contact information for the on-site project coordinator.
5. The sequencing of construction activities and specific measures that will be implemented in conjunction with these activities.
6. The Contractor is required to submit the "EPSC Contractor Checklist" for review and approval by the VTrans Construction Environmental Engineer prior to commencement of construction.

DESCRIPTION OF PROJECT

This project involves reconstruction of bridge # 50 over Crook Brook on VT 105 in the town of Jay. Crook Brook is characterized as a moderately steep stream with some bank erosion but mostly stable. The streambed consists of Gravel and Cobbles. The total drainage area is 1.5 square miles.

Features of concern with respect to erosion control include embankments immediately adjacent to the project. A new buried precast concrete box will be constructed on the existing alignment. Traffic will be maintained with a detour as shown on the project plans. The construction limits do not approach any buildings or any other structures outside the project limits.

It is anticipated that the project will last one construction season.

Disturbed area (excluding waste, borrow, and staging areas) = 0.20 acres. Estimated Total disturbed area (including waste, staging, and borrow) is anticipated to be less than 1 Acre.

SITE INVENTORY ANALYSIS

1. OFF SITE DRAINAGE CHARACTERISTICS AND TOPGRAPHY

The area outside the immediate vicinity of this project is primarily Mixed dense woods, and is hilly to mountainous. VT Route 105 is a paved state highway, and is in excess of 6% gradient. There is very limited development, consisting mainly of farms which are located approximately 3000 feet westerly of the project. There is a gravel drive approximately 150 feet westerly of the outlet end of the culvert. A drive culvert beneath the drive drains roadside and drainage from a mown field into the wetland area near the outlet end of the culvert.

2. DRAINAGE, WATERWAYS, AND BODIES OF WATER.

There is a manmade pond and a large mown field northwesterly of the project, approximately 100 feet distance from the nearest disturbed soils, and at a higher elevation than the project. The Pond eventually drains into Crook Brook further downstream of the project. A Wetland area has been identified and is located along the northwestern streambank, just outside the project limits. It is shown on the project plans.

3. DESCRIPTION OF EXISTING VEGETATIVE COVER

In the immediate vicinity of the project, the existing ground cover is mostly grassy with intermittent deciduous shrubs and small trees, as depicted on the plans by the area survey.

4.DESCRIPTION OF EXISTING SOILS

A detailed description of the soil types expected to be encountered in the project area is unavailable at this time. For the purpose of this narrative we are using engineering judgment to classify the soils expected to be encountered.

The soils are mostly engineered fills from a previous project. This soil exhibits a high percolation rate that results in low erodability.

5. SENSITIVE RESOURCE AREAS

In the immediate vicinity of the project, only identified area are Crook Brook, and the Riparian Buffer.

DESCRIPTION OF SLOPES

The existing shape of the project area can be seen by looking at the erosion control existing conditions sheet where the existing contours are shown. The contours are shown in dashed and depict the half foot interval. Major contours are shown at 5 foot intervals, and are labeled.

EXISTING SLOPES

Generally speaking, the project impacts steep but short slopes.

PROPOSED SLOPES

Fill slopes that are 1-2 (50%) or flatter will be seeded and mulched, 1-1.5 slopes will be sodded or lined with stone fill. These slopes will be protected until they are fully vegetated. The slopes along the channel banks will be lined with heavy stone and are at 1-1.5 (67%) slope.

MAINTENANCE PLAN FOR EROSION AND SEDIMENT CONTROLS

- The following maintenance schedule will be followed throughout the duration of the project.
1. An assigned individual who can be associated with the day-to-day operations of the project shall do monitoring of the construction site. The inspector will be familiar with this plan and with erosion & sediment control procedures and with road and bridge construction techniques. Site reviews will be performed at least once every seven calendar days, and within 24 hours of a storm event great enough to cause water to leave the construction site.
 2. A copy of the Erosion Prevention and Sediment Control Weekly Plan Review prepared by the site reviewer shall be given to the Resident Engineer each week. The report will be filled out in accordance with the item 652.20 MONITORING EPSC Plan.
 3. The plan preparer will be available for on-site consultations with the Resident Engineer within twenty four hours of the request.
 4. All silt fences and stone check dams will be inspected each site visit by the designated inspector, as described below:
 - i. These controls will be maintained in good condition. Any silt fence or stone check dam that is ineffective will be repaired or replaced immediately.
 - ii. Sediment deposits will be removed when they reach one-half the height of the sediment control device.
 - iii. All sediments removed will be deposited in an upland portion of the project site, or disposed off-site in the designated project waste site.
 5. All slopes will be checked each site visit and any eroded areas will be immediately repaired. Temporary stabilization methods will be used as necessary until final stabilization measures are in place.
 6. Both temporary & permanent seeding & mulching will be checked each site visit for vegetative growth. Any areas requiring re-vegetation will be repaired immediately.
 7. Drainage structures will be cleaned as necessary to remove any sediment buildup in the sump of the structures or at the inlet of the structure.
 - i. Any inlet control found to be ineffective will be replaced as necessary and will be done immediately.
 - ii. All sediments removed will be deposited in an upland portion of the project site, or disposed off-site in the designated project waste site.
 8. Temporary construction accesses will be monitored each site visit. Any control found to be ineffective will be promptly replaced.
 9. All temporary erosion control devices will stay in place until final grass growth has been established and complete stabilization of the areas has occurred.
 10. Once stabilization has occurred, all temporary erosion control measures will be removed and all disturbed areas will be stabilized with erosion matting and/or seed & mulch.

EROSION CONTROL NARRATIVE	SHEET 11 OF 39

EROSION CONTROL NARRATIVE

SPECIFIC GUIDELINES

PHASE 1 - ESTABLISH PERIMETER EROSION CONTROLS

Prior to any construction or staging, the contractor will install Vehicle Tracking pads leading to staging areas and the project site to prevent the tracking of silts and sediments offsite. Coarse stone fill over filter fabric should be utilized where an already established stable entrance does not exist. The crushed stone product used for the construction of the Vehicle Tracking pads shall be monitored for sediment accumulation and replaced as necessary as directed by the Resident Engineer. Vehicle Tracking pads shall also be established and maintained at all offsite waste and borrow areas.

After the clearing of trees and shrubs, but prior to any grubbing and excavation, construct perimeter controls to ensure that any sediment does not leave the site. Water treated with Sediment traps and basins may be directed to nearby streams or swales.

Install perimeter silt barrier in areas of proposed work as shown on the plans prior to grubbing and filling activities. In areas of high exposure, it may be necessary to double up protection with additional silt fencing or placement of hay bales behind the silt fencing. In areas of exposed ledge, stone check dams will be utilized.

During grubbing operations, stone check dam barriers shall be installed at any obvious concentrated flow discharge points, or as directed by the Resident Engineer.

After the grubbing activity all areas of exposed soils shall be temporarily stabilized with mulching & seeding, erosion matting, as soon as practicable and before any predicted rainfall event. These temporary erosion control measures can be placed in any combination in areas of potential erosion as deemed necessary by the Resident Engineer.

After perimeter controls are in place, and prior to grading operations, construct temporary onsite sediment traps and provide inlet protection where necessary. Grade disturbed areas to drain towards sediment trap where possible.

All material stockpiles, including but not limited to, grubbing material, sand borrow, earth borrow, granular borrow, topsoil, subbase, and any excavated waste piles shall also have silt fence installed around the base of the stockpile. The Contractor is required to obtain clearance by the VTrans Environmental Section prior to commencement of construction.

PHASE 2 - ESTABLISH CULVERT EROSION CONTROLS

New slopes steeper than 50% (1-2 slope) will be constructed with stone fill for slope stabilization as the embankment construction progresses. All collected sediments should be removed from the settling structures and the ground shaped to its final grade and slope. Dispose of the collected sediments in an upland portion of the project, or in a manner approved by the Resident Engineer that will not result in sediments or pollutants entering the stream. The final design of the Sediment Basin will be provided by the Contractor.

PHASE 3 - ESTABLISH ROADWAY EROSION CONTROLS

On any partially completed permanent cut and fill slopes, all exposed soils will be stabilized with erosion matting or seeded and mulched.

The subbase material should be placed as soon as the subgrade has reached its final grade and slope. The traveling surface will be graded to promote sheet flow off the surface onto slopes, or flows will be directed to collection areas and shall be transported down the fill slopes to sediment traps or settling basins.

All graded areas shall be permanently stabilized following final grading activities. All areas that are graded outside of the growing season shall be treated with slope stabilization until seeding & mulching can be performed.

PHASE 4 - FINAL EROSION CONTROLS

Removal of silt fence shall commence only after all upslope areas are stabilized and well established, and the Resident Engineers has approved the removal.

Remove perimeter silt fences, and sediment traps, only after any toe-of-fill ditches have stabilized and vegetation is well established.

Remove all remaining temporary erosion control measures, regrade any areas if necessary, treat all regraded areas with erosion matting and or mulch & seed, and establishment of any final erosion control devices as deemed necessary by the Resident Engineer.

EROSION MATTING FOR DITCHES

APPLICATION NOTES:

- THE PURPOSE OF LINING THE DITCH WITH EROSION MATTING IS TO REDUCE EROSION AND AID THE ESTABLISHMENT OF VEGETATION AT LOW VELOCITIES.
- TYPE OF EROSION MATTING TO BE USED SHOULD BE BASED ON FACTORS SPECIFIC TO EACH APPLICATION. SEE SPECIFICATIONS AND PRODUCT RECOMMENDATIONS FOR SUITABILITY.

GENERAL NOTES:

- WATER MAY NEED TO BE DIVERTED TO ALLOW PROPER MATTING INSTALLATION.
- GRADE AND SMOOTH CHANNEL TO PROVIDE GOOD MATTING TO SOIL SURFACE CONTACT.
- APPLY FERTILIZER, LIME, AND SEED PRIOR TO PLACING MATTING.
- INSTALL MATTING IN THE CENTER OF THE CHANNEL, IN THE DIRECTION OF THE WATER FLOW.
- INSTALL MATTING ON THE SIDE SLOPES OF THE CHANNEL, OVERLAPPING THE CENTER MAT.
- ANCHOR MATTING AS SHOWN, UTILIZING ANCHOR STAPLES. STAPLE PLACEMENT SHALL BE DETERMINED BY THE MANUFACTURER'S INSTALLATION INSTRUCTIONS.
- EROSION MATTING SHALL BE INSPECTED EVERY SEVEN (7) CALENDAR DAYS AND WITHIN 24 HOURS OF A STORM EVENT GREAT ENOUGH TO CAUSE WATER TO LEAVE THE CONSTRUCTION SITE.
- EROSION MATTING SHALL BE REPAIRED AND RESTAPLED AS NECESSARY TO ENSURE PROPER FUNCTION.

EROSION MATTING FOR SLOPES

APPLICATION NOTES:

- THE PURPOSE OF EROSION MATTING ON SLOPES IS TO REDUCE EROSION AND AID THE ESTABLISHMENT OF VEGETATION
- EROSION CONTROL MATTING SHALL BE USED FOR THE FOLLOWING REASONS:
 - SLOPES $> 3H:1V$
 - AREAS WHERE SEED AND MULCH WILL NOT STAY IN PLACE ALONE
 - WHERE SEEDING IS OUTSIDE THE GROWING SEASON.

GENERAL NOTES:

- GRADE AND SMOOTH THE SLOPE TO PROVIDE GOOD MATTING TO SOIL SURFACE CONTACT.
- APPLY FERTILIZER, LIME, AND SEED PRIOR TO PLACING MATTING.
- ANCHOR MATTING AS SHOWN, UTILIZING ANCHOR STAPLES. STAPLE PLACEMENT SHALL BE DETERMINED BY THE MANUFACTURER'S INSTALLATION INSTRUCTIONS.
- UNROLL EROSION MATTING VERTICALLY DOWN SLOPE IN THE DIRECTION OF WATER FLOW.
- OVERLAP UPPER MATTING OVER LOWER MATTING AS SHOWN.
- OVERLAP ADJACENT MATTING AS SHOWN.
- CUT EXCESS MATTING AT END OF SLOPE AND ANCHOR THE END.
- EROSION MATTING SHALL BE INSPECTED EVERY SEVEN (7) CALENDAR DAYS AND WITHIN 24 HOURS OF A STORM EVENT GREAT ENOUGH TO CAUSE WATER TO LEAVE THE CONSTRUCTION SITE.
- EROSION MATTING SHALL BE REPAIRED AND RESTAPLED AS NECESSARY TO ENSURE PROPER FUNCTION.

SILT FENCE

APPLICATION NOTES:

- A. THE PRIMARY PURPOSE OF SILT FENCE IS TO REDUCE RUNOFF VELOCITY AND TRAP SEDIMENT. VELOCITY IS REDUCED, WATER IS IMPOUNDED BEHIND THE MEASURE, AND SEDIMENT FALLS OUT OF SUSPENSION.
- B. SILT FENCE SHALL NOT BE USED ACROSS CONCENTRATED FLOW.

GENERAL NOTES:

- 1. SILT FENCE SHALL GENERALLY BE PLACED A MINIMUM OF 5 FEET BEYOND TOE OF SLOPE, 10 FEET PREFERRED, TO PROVIDE ADEQUATE AREA FOR SEDIMENT STORAGE AND FACILITATE MAINTENANCE OF SEDIMENT CONTAINMENT AREA.
- 2. SILT FENCE SHALL BE INSTALLED ON A LINE OF EQUAL ELEVATION (CONTOUR). IT MAY BE INSTALLED AT INTERMEDIATE POINTS UP SLOPES AS WELL AS AT THE BOTTOM, AS SHOWN IN THE DETAIL.
- 3. ALL ENDS SHALL BE 'J' HOOKED TO TRAP SEDIMENT.
- 4. IN AREAS WITH TWO SLOPES, SILT FENCE SHALL BE USED TO ERECT A DAM AND TRAP SEDIMENT AT THE BASE OF THE STEEPER SLOPE.
- 5. THE BOTTOM EDGE OF SILT FENCE SHALL BE BURIED A MINIMUM OF 6 INCHES BELOW GROUND, AND KEYED IN 4 INCHES. THE FENCE SHALL BE INSTALLED WITH THE POSTS ON THE DOWNSTREAM SIDE OF THE FABRIC.
- 6. MAXIMUM DRAINAGE AREA TRIBUTARY TO 100 FEET OF SILT FENCE SHALL BE 0.25 ACRES.
- 7. THE FOLLOWING ARE MAXIMUM LENGTHS FOR SILT FENCE INSTALATIONS:

CONSTRUCTED SLOPE	SLOPE LENGTH (LS) FT	HORIZONTAL LENGTH (LH) FT
3H : 1V	80	75
4H : 1V	130	125
5H : 1V	200	200
> 5H : 1V	250	250

- 8. WHERE ELONGATION IS >50%, POST SPACING SHALL NOT EXCERED 4 FEET. WHERE ELONGATION IS <50%, POST SPACING SHALL NOT EXCEED 6 FEET.
- 9. SILT FENCE SHALL BE INSPECTED EVERY SEVEN (7) CALENDAR DAYS AND WITHIN 24 HOURS OF A STORM EVENT GREAT ENOUGH TO CAUSE WATER TO LEAVE THE CONSTRUCTION SITE.
- 10. SILT FENCE SHALL BE CLEANED AND REPAIRED AS NEEDED. SEDIMENT SHALL BE REMOVED WHEN ACCUMULATION REACHES ONE-HALF OF THE MEASURE HEIGHT. SEDIMENT SHALL BE DISPOSED OF AT AN APPROVED WASTE SITE.
- 11. SILT FENCE SHALL BE REMOVED WHEN THE AREA HAS BEEN STABILIZED. AT TIME OF REMOVAL OF THE SILT FENCE, THE DISTURBED AREA SHALL BE REPAIRED AND STABILIZED.

STABILIZED VEHICLE TRACKING PAD

APPLICATION NOTES:

A. THE PURPOSE OF A STABILIZED VEHICLE TRACKING PAD IS TO REDUCE OR ELIMINATE THE TRACKING OF SEDIMENT ONTO PUBLIC RIGHTS OF WAY OR STREETS.

GENERAL NOTES:

1. STONE SIZE - USE CLEAN STONE WITH GRADATION BETWEEN 2 INCHES AND 4 INCHES .
2. LENGTH - 50 FEET (MIN)
3. THICKNESS - 18 INCHES (MIN)
4. WIDTH - 12 FEET (MIN)
5. GEOTEXTILE UNDER STONE WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD VEHICLE TRACKING PADS SHALL BE PIPED ACROSS THE ENTRANCE AS DIRECTED BY THE ENGINEER, IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. PROPOSED DRAINAGE PIPES SHALL BE SIZED WITH SUFFICIENT CAPACITY TO CARRY DITCH FLOWS. ALTERNATIVE WAYS OF TRANSPORTING DITCH DRAINAGE ACROSS VEHICLE TRACKING PADS MAY BE PROPOSED BY THE CONTRACTOR FOR APPROVAL BY THE ENGINEER.
8. WHEN WASHING OF VEHICLE IS NECESSARY, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. MEASURES SHALL BE INSPECTED EVERY SEVEN (7) CALENDAR DAYS AND WITHIN 24 HOURS OF A STORM EVENT GREAT ENOUGH TO CAUSE WATER TO LEAVE THE CONSTRUCTION SITE.
10. MAINTENANCE- THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. ALL SEDIMENT SPILLED, DROPPED, WASHED, OR TRACKED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
11. AT THE TIME OF REMOVAL OF THE STABILIZED VEHICLE TRACKING PAD THE DISTURBED AREA SHALL BE REPAIRED AND STABILIZED.
12. PAYMENT OF THE STABILIZED VEHICLE TRACKING PAD SHALL BE MADE UNDER APPLICABLE ITEMS INCLUDED IN THE CONTRACT PLANS OR UNDER THE FIELD MAINTENANCE OF EROSION & SEDIMENT CONTROL PLAN ITEM.
13. PAYMENT FOR MONITORING STABILIZED VEHICLE TRACKING PADS SHALL BE MADE UNDER THE MONITORING EROSION & SEDIMENT CONTROL PLAN ITEM.
14. PAYMENT FOR MAINTAINING THE VEHICLE TRACKING PAD SHALL BE MADE UNDER THE MAINTENANCE OF EROSION & SEDIMENT CONTROL PLAN ITEM, UNLESS MAINTENANCE IS REQUIRED DUE TO POOR INSTALLATION PRACTICES.

DEFINITIONS (AASHTO)

BEDROCK (LEDGE) - Rock in its native location of indefinite thickness.

BOULDER - A rock fragment with an average dimension > 12 inches.

COBBLE - Rock fragments with an average dimension between 3 and 12 inches.

GRAVEL - Rounded particles of rock < 3" and > 0.075" (#10 sieve).

SAND - Particles of rock < 0.075" (#10 sieve) and > 0.0025" (#200 sieve).

SILT - Soil < 0.0025" (#200 sieve), non or slightly plastic and exhibits no strength when air-dried.

CLAY - Fine grained soil, exhibits plasticity when moist and considerable strength when air-dried.

VARVED - Alternate layers of silt and clay.

HARDPAN - Extremely dense soil, cemented layer, not softened when wet.

MUCK - Soft organic soil (containing > 10% organic material).

MOISTURE CONTENT - Weight of water divided by dry weight of soil.

FLOWING SAND - Granular soil so saturated (loose) that it flows into drill casing during extraction of wash rod.

STRIKE - Angle from magnetic north to line of intersection of bed with a horizontal plane.

DIP - Inclination of bed with a horizontal plane.

GENERAL NOTES

1. The subsurface explorations shown herein were made between 6/30/05 and 7/14/05 by the Agency.

2. Soil and rock classifications, properties and descriptions are based on engineering interpretation from available subsurface information by the Agency and may not necessarily reflect actual variations in subsurface conditions that may be encountered between individual boring or sample locations.

3. Observed water levels and/or conditions indicated are as recorded at the time of exploration and may vary according to the prevailing rainfall, methods of exploration and other factors.

4. Engineering judgement was exercised in preparing the subsurface information presented herein. Analysis and interpretation of subsurface data was performed and interpreted for Agency design and estimating purposes. Presentation of the information in the Contract is intended to provide the Contractor access to the same data available to the Agency. The subsurface information is presented in good faith and is not intended as a substitute for personal investigation, independent interpretation, independent analysis or judgement by the Contractor.

5. Pictorial structure details shown on the boring plan layout or soils profile are for illustrative purposes only and may not accurately portray final contract details.

6. Terminology used on boring logs to describe the hardness, degree of weathering, and spacing of fractures, joints and other discontinuities in the bedrock is defined in the AASHTO Manual on Subsurface Investigations, 1988.

GENERAL NOTES

GENERAL

1.

ALL MATERIALS AND CONSTRUCTION SHALL CONFORM TO THE AGENCY OF TRANSPORTATION'S STANDARD SPECIFICATIONS FOR CONSTRUCTION, DATED 2006, AND ITS LATEST REVISIONS, AND THE AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, SEVENTEENTH (17TH) EDITION, AND ITS LATEST REVISIONS.
2.

IN-STREAM CONSTRUCTION SHALL BE RESTRICTED TO JUNE 1 TO OCTOBER 1 UNLESS THE CONTRACTOR OBTAINS WRITTEN PERMISSION FROM THE AGENCY OF NATURAL RESOURCES TO DO WORK OUTSIDE OF THAT TIME FRAME.
3.

ALL DIMENSIONS ARE HORIZONTAL OR VERTICAL AND ARE GIVEN AT 68 DEGREES F UNLESS OTHERWISE NOTED.
4.

ITEM 404.65 EMULSIFIED ASPHALT IS TO BE APPLIED AT A RATE OF .015 GAL/SY BETWEEN SUCCESSIVE COURSES OF PAYMENT OR AS DIRECTED BY THE ENGINEER.
5.

ITEM 900.625 SPECIAL PROVISION (WATER REPELLENT, SILANE) SHALL BE APPLIED TO ALL EXPOSED SURFACES OF THE WINGWALLS AND HEADWALLS. WATER REPELLENT, SILANE SHALL BE APPLIED TO THE EXPOSED INSIDE SURFACE OF THE BOX STARTING AT THE OPENING AT EACH END AND EXTENDING 3 FEET INTO THE BOX, INCLUDING THE TOP SURFACE OF THE BOTTOM SLAB AND THE BOTTOM SURFACE OF THE TOP SLAB.
6.

ITEM 529.15 "REMOVAL OF STRUCTURE" SHALL BE USED FOR REMOVAL OF THE PIPE AND ANY PORTIONS OF THE HEADWALLS AND WINGWALLS NOT REMOVED UNDER THE ITEMS "STRUCTURE EXCAVATION" OR "UNCLASSIFIED CHANNEL EXCAVATION".
7.

REINFORCING STEEL PLACEMENT TOLERANCES SHALL BE AS FOLLOWS:

SPACING +/- 1"
CLEARANCE +/- ¼"
8.

ALL EXPOSED EDGES OF CONCRETE SHALL BE CHAMFERED 1" X 1".
9.

W150 x 13.5 STEEL POSTS AND OFFEST BLOCKS SHALL BE USED WITH HEAVY DUTY STEEL GUARDRAIL.

TRAFFIC CONTROL

10.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE REGIONAL DETOUR PACKAGE AS SHOWN IN THE PLANS.
11.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR SUPPLYING THE LOCAL TRAFFIC CONTROL PACKAGE IDENTIFYING THE CONSTRUCTION PROJECT BEFORE, DURING, AND AFTER THE BRIDGE CLOSURE PERIOD. THE CONTRACTOR SHALL SUBMIT A DETAILED TRAFFIC CONTROL PLAN TO THE RESIDENT ENGINEER FOR ALL STAGES OF CONSTRUCTION. ALL COSTS SHALL BE INCLUDED IN ITEM 641.10, TRAFFIC CONTROL.
12.

ACCESS TO ALL EXISTING DRIVES SHALL BE MAINTAINED AT ALL TIMES DURING ALL PHASES OF CONSTRUCTION.
13.

INSTALLATION OF DETOUR SIGNS SHALL NOT BLOCK ANY EXISTING TRAFFIC CONTROL SIGN ASSEMBLIES. THE CONTRACTOR SHALL TRY TO MAINTAIN AT LEAST 200 FEET BETWEEN SIGN ASSEMBLIES.
14.

THE CONTRACTOR SHALL CONTACT DIG SAFE AT 1-888-344-7233 PRIOR TO BREAKING GROUND TO INSTALL ANY SIGN POSTS.
15.

ALL SIGNS THAT ARE 36" x 36" OR LARGER SHALL BE ON TWO POSTS.

PRECAST CONCRETE NOTES

16.

DESIGN CRITERIA:

A. SOIL UNIT WEIGHT = 140 PCF
B. DESIGN LIVE LOAD = HS-25-44
C. MAX. WINGWALL FOOTING PRESSURE = 4 KSF
D. FACTOR OF SAFETY FOR SLIDING >= 2.0
E. FACTOR OF SAFETY FOR OVERTURNING >= 1.5
F. DESIGN FILL OVER BOX = 11 FEET
17.

ALL CONCRETE SHALL BE PRECAST. ITEM 540.10 PRECAST CONCRETE STRUCTURE INCLUDES ALL BOX SEGMENTS, HEADWALLS, AND WINGWALLS. ALL CONNECTIONS SHALL BE DESIGNED BY THE FABRICATOR AND SHALL BE CONSIDERED INCIDENTAL TO ITEM 540.10. ALL CONNECTIONS MUST BE SUBMITTED TO THE PROJECT MANAGER FOR APPROVAL.
18.

THE PRECAST BOX SECTIONS ARE SHOWN FOR REFERENCE ONLY. THE ACTUAL DIMENSIONS AND SHAPE WILL BE DEPENDENT ON THE FABRICATOR. ALL UNITS EXCEPT THE FIRST AND LAST WILL BE THE SAME SHAPE AND THE SAME LENGTH. THE MINIMUM INSIDE DIMENSIONS SHALL BE 9'-0" IN HEIGHT AND 15'-0" IN WIDTH. THE OVERALL LENGTH OF THE BOX SHALL BE 80'-0" ALONG THE STREAMBED GRADE. THE EXPOSED ENDS OF THE FIRST AND LAST UNITS SHALL BE VERTICAL.
19.

THE EXTERIOR (TOP AND SIDES) OF ALL CONCRETE BOX JOINTS ALONG WITH ALL LIFTING HOLES SHALL BE FILLED WITH MORTAR TYPE IV AFTER BEING SET IN THEIR FINAL POSITION. THIS WORK SHALL BE CONSIDERED INCIDENTAL TO ITEM 540.10.
20.

A TWO (2) FOOT WIDE STRIP OF MEMBRANE WATERPROOFING SHALL BE APPLIED AT EACH BOX JOINT (TOP AND SIDES). MEMBRANE SHALL BE CENTERED ON THE JOINT AND COVER THE FULL WIDTH OF THE TOP AND FULL HEIGHT OF THE SIDES. THE SIDES SHALL BE COVERED FIRST AND THE TOP WILL FOLLOW. ANY OVERLAPPING OF MEMBRANE SHALL BE DONE IN A SHINGLE TYPE STYLE TO SHED WATER AND SHALL OVERLAP A MINIMUM OF ONE FOOT. PAYMENT FOR MEMBRANE SHALL BE UNDER ITEM 519.21 SHEET MEMBRANE WATERPROOFING, PREFORMED SHEET.
21.

THE STRUCTURE WILL BE AT A 4.33% GRADE SIMULATING THAT OF THE STREAM.

A Computer Program for the Structural
Design of Reinforced Concrete Box
Culverts

Developed by

Simpson Gumpertz & Heger Inc.
Arlington Massachusetts
in cooperation with

The Federal Highway Administration
and
The American Concrete Pipe Association

The successful application and use of this software product
is dependent on the application of skilled engineering
judgment and is the responsibility of the user. The user
must select input values suitable to his specific
installation. The information presented in the computer
output is for review, interpretation, application and
approval by a qualified engineer.

ANY IMPLIED OR EXPRESS WARRANTIES COVERING THE
SOFTWARE PROGRAM OR PROGRAM USER MANUAL INCLUDING
ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A
PARTICULAR PURPOSE ARE EXPRESSLY EXCLUDED. SIMPSON
GUMPERTZ & HEGER INC., THE AMERICAN CONCRETE PIPE
ASSOCIATION, AND THE FEDERAL HIGHWAY ADMINISTRATION
SHALL NOT BE LIABLE FOR SPECIAL, INCIDENTAL, CONSEQUENTIAL
INDIRECT OR OTHER SIMILAR DAMAGES ARISING FROM BREACH
OF WARRANTY, BREACH OF CONTRACT OR OTHER LEGAL THEORY
EVEN IF SUCH PARTIES HAVE BEEN ADVISED OF SUCH DAMAGES.

Date: 05-10-2007
Time: 09:31:23

Filename - 070402

Job Description - 15'x9' Box Culvert

GEOMETRY

Span	15. ft	Top Slab Thickness	12. in.
Rise	9. ft	Bottom Slab Thickness	12. in.
Min. Depth of Fill	11. ft	Sidewall Thickness	10. in.
Max. Depth of Fill	11. ft	Length of Precast	6.25 ft
Depth Increment	0. ft	Section	

HAUNCH DIMENSIONS

Top Vertical	8. in.
Top Horizontal	8. in.
Bottom Vertical	8. in.
Bottom Horizontal	8. in.

CONCRETE COVERS

Top Outside	1.00 in.
Bottom Outside	1.00 in.
Sidewall Outside	1.00 in.
Top Inside	1.00 in.
Bottom Inside	1.00 in.
Sidewall Inside	1.00 in.

MATERIAL PROPERTIES

Main Reinforcing Yield Stress	60000. psi
Design Concrete Strength	5000. psi
Concrete Density	150. pcf

DESIGN SPECIFICATION

AASHTO Standard

LOAD FACTORS

Dead Load: Shear and Moment	1.30
Thrust	1.00
Live Load: Shear and Moment	2.17
Thrust	1.00

LOAD MODIFIERS

Dead Load: Shear and Moment	1.00
Thrust	1.00
Live Load: Shear and Moment	1.00
Thrust	1.00

STRENGTH REDUCTION FACTORS

Flexure	0.90
Shear	0.85

REINFORCING DATA

	DIAMETER	SPACING
Top Slab Outside Face(AS7)	0.5 in.	8 in.
Bottom Slab Outside Face(AS8)	0.5 in.	8 in.
Sidewall Outside Face(AS1)	1 in.	9 in.
Top Slab Inside Face(AS2)	1.128 in.	7 in.
Bottom Slab Inside Face(AS3)	1 in.	6 in.
Sidewall Inside Face(AS4)	0.5 in.	10 in.

The diameters are used to estimate depth to tension reinforcing from compression face. They do not represent required reinforcing diameters.

SOIL LOAD DATA

Soil Density	140 pcf
Minimum Lateral Pressure Coefficient	0.25
Maximum Lateral Pressure Coefficient	0.50
Installation Type	Embankment/Compacted
Soil-Structure Interaction Factor	1.132

LIVE LOAD DATA

Live Load	AASHTO HS-Series
Live Load Magnitude	25 US tons
Tire Footprint Length	.0 in.
Tire Footprint Width	.0 in.
Live Load Distribution Factor	1.75
Direction of travel	Parallel to span
Impact Factor	1.00
Lane Load	0.0 psf

SURCHARGE LOADS

Vertical Pressure	0.0 psf
Horiz. Pressure at Culvert Top	0.0 psf
Horiz. Pressure at Culvert Bottom	0.0 psf
Application Code	Additional Dead Load

FLUID LOADS

Depth of Fluid	9.0 ft
Fluid Density	62.5 pcf

Top Slab - Outside Face	1.00
Bottom Slab - Outside Face	1.00
Side Wall - Outside Face	1.00
Top Slab - Inside Face	1.00
Bottom Slab - Inside Face	1.00
Side Wall - Inside Face	1.00

R E I N F O R C I N G D A T A

LOCATION	AREA (in. ² /ft)	STIRRUPS REQUIRED?
TRANSVERSE		
Side Wall - Outside Face (AS1)	1.012	No
Top Slab - Inside Face (AS2)	1.643	No
Bottom Slab - Inside Face (AS3)	1.574	No
Side Wall - Inside Face (AS4)	0.240	No
Top Slab - Outside Face (AS7)	0.288	No
Bottom Slab - Outside Face (AS8)	0.288	No

Notes:

- 1 Sidewall outside face steel (AS1) is bent at the culvert corners and extended 27 in. from the bend point into the top slab. The top slab outside face steel (AS7) must lap the AS1 steel in accordance with AASHTO provisions for tension lap splices. To obtain the total AS1 extension into the top slab, the tension lap splice length must be calculated and added to the 27 in. extension length.
- 2 Sidewall outside face steel (AS1) is bent at the culvert corners and extended 27 in. from the bend point into the bottom slab. The bottom outside face steel (AS8) must lap the AS1 steel in accordance with AASHTO provisions for tension lap splices. To obtain the total AS1 extension into the bottom slab, the tension lap splice length must be calculated and added to the 27 in. extension length.
- 3 There may be negative moment from the outside corner of the box to 34 in. across the top slab
- 4 There may be negative moment from the outside corner of the box to 37 in. across the bottom slab.
- 5 BOXCAR does not check for differential deflection of the top slab between adjacent box sections for service live load.

- * <L1> is Splice Length
- * <L2> is AS1 Extension
- * (AS7) is Top Slab Outside
- * (AS8) is Bottom Slab Outside
- * See Box Culvert Design Summary Sheet for transverse and distribution reinforcement, as required.
- * For sidewall thicknesses of 6 in. and above, extend AS2 and AS3 a min. of 4 in. beyond the inside face of the sidewall. For thicknesses less than 6 in., extend AS2 and AS3 at least to within 1-1/2 in. of the outside face of the sidewall.

Notes:

- 1) Other reinforcement schemes that provide the required reinforcement areas at all locations identified in the program output are acceptable.
- 2) Longitudinal reinforcement is not shown for clarity, see AASHTO M259 for longitudinal reinforcement and for additional requirements.
